

VIRTUALIZATION ASSESSMENT

SERVER CONSOLIDATION WITH
VMWARE® VSPHERE™

Virtualization dramatically improves the efficiency and availability of resources and applications in your organization. Internal resources are underutilized under the old “one server, one application” model and IT administrators spend too much time managing servers rather than innovating. An automated datacenter, built on a VMware® virtualization platform, lets you respond to market dynamics faster and more efficiently than ever before. RTI’s virtualization assessment includes;

- **Experienced, certified engineers** efficiently test your server environment using VMware® Capacity Planner™
- **Potential cost savings** associated with running VMware® vSphere™ are determined by estimating the server hardware and the number of VMware® licenses you will require
- **Install VMware® Capacity Planner™** for 30 days, outlining the performance of up to 200 Windows™ based servers
- **Provide detailed analysis**, total cost of ownership, and make experienced recommendations based on the data collected by VMware® Capacity Planner™

Minimum System Requirements:

- Dedicated network (including internet access)
- Windows 2000 Server with SP3
- 500 MHz CPU
- 256 MB RAM
- 2GB free disk space
- Local and domain administrator (root) access

Our team of professionals will come to your location for up to 2 days and work directly with your IT professionals to layout your custom virtual environment.
